Dr Suzanne Hollins joined ANSTO in 2001, and was appointed Head of Research, Nuclear Science & Technology and Landmark Infrastructure in February 2016 after almost twelve years as Leader of the Isotopes for Water research program. She is responsible for the management and delivery of world class applied and translational research programs that utilise nuclear techniques to contribute to supporting a sustainable and healthier future.

Suzanne holds a Bachelor of Science (Hons) and a PhD in environmental physics and has particular research expertise in applying isotopic and nuclear techniques to provide scientific knowledge that underpins effective management of groundwater and rivers, freshwater ecosystems, and the human activities that affect them. Dr Hollins is involved in a variety of projects throughout Australia, including looking at the impacts of water management on freshwater wetlands, groundwater sustainability, connectivity between surface and groundwater, and the use of stable water isotopes to understand hydrological and climate processes.
